

# Model Deployment on Flask by Bisma Azeem

## Step 1: Data pre processing and Data Modeling (model.py)

```
model.py > [?] lr
  Click here to ask Blackbox to help you code faster
1  import pandas as pd
2  import numpy as np
3  import pickle
4  from sklearn.datasets import load_iris
5  from sklearn.model_selection import train_test_split
6  from sklearn.linear_model import LogisticRegression
7  from flask import Flask, request, jsonify, render_template
8
9  iris=load_iris()
10 dir(iris)
11
12 iris.feature_names
13
14 iris_df=pd.DataFrame(iris.data,columns=iris.feature_names)
15 iris_df.head()
16
17 iris_df['target']=iris.target
18 iris_df
19
20 iris_df['flower_name']=iris_df.target.apply(lambda x : iris.target_names[x])
21 iris_df
22
23 iris_df=iris_df.drop(columns='target')
24
25 iris_df
26
27 X=iris_df.drop(columns='flower_name')
28 y=iris_df['flower_name']
29
30 X_train, X_test, y_train, y_test = train_test_split(X, y, test_size=0.2)
31
32 lr=LogisticRegression(max_iter=1000)
33
34
35 lr.fit(X_train,y_train)
```

## Step 2: Pickling the model (model.pkl)

```
37  pickle.dump(lr,open('model.pkl','wb'))
```

### Step 3: Website design file(file.html)

```
templates > <> file.html > ...
  Click here to ask Blackbox to help you code faster
1  <!DOCTYPE html>
2  <html lang="en">
3  <head>
4    <meta charset="UTF-8">
5    <title>Flower Classification</title>
6    <style>
7      body {
8        font-family: Arial, sans-serif;
9        margin: 20px;
10     }
11
12     h1 {
13       text-align: center;
14       margin-bottom: 20px;
15     }
16
17     .form-group {
18       margin-bottom: 15px;
19     }
20
21     label {
22       display: block;
23       margin-bottom: 5px;
24     }
25
26     input[type="text"] {
27       width: 75%;
28       padding: 10px;
29       border: 1px solid #ccc;
30     }
31
32     .btn {
33       background-color: #3498db;
34       color: #fff;
35       padding: 10px 20px;
36       border: none;
37       border-radius: 3px;
38       cursor: pointer;
39     }
40
41     .btn:hover {
42       background-color: #2980b9;
43     }
44  </style>
</head>
```

```

39     }
40
41     .btn:hover {
42         background-color: #2980b9;
43     }
44
45     #prediction {
46         text-align: center;
47         font-weight: bold;
48         margin-top: 20px;
49     }
50 </style>
51 </head>
52 <body>
53     <h1>Flower Class Prediction</h1>
54     <form action="{{ url_for('predict') }}" method="post">
55         <div class="form-group">
56             <label for="Sepal_Length">Sepal Length:</label>
57             <input type="text" name="Sepal_Length" id="Sepal_Length" placeholder="Enter Sepal Length" required>
58         </div>
59         <div class="form-group">
60             <label for="Sepal_Width">Sepal Width:</label>
61             <input type="text" name="Sepal_Width" id="Sepal_Width" placeholder="Enter Sepal Width" required>
62         </div>
63         <div class="form-group">
64             <label for="Petal_Length">Petal Length:</label>
65             <input type="text" name="Petal_Length" id="Petal_Length" placeholder="Enter Petal Length" required>
66         </div>
67         <div class="form-group">
68             <label for="Petal_Width">Petal Width:</label>
69             <input type="text" name="Petal_Width" id="Petal_Width" placeholder="Enter Petal Width" required>
70         </div>
71         <button type="submit" class="btn">Predict</button>
72     </form>
73     <br>
74     <p id="prediction">{{ prediction_text }}</p>
75 </body>
76 </html>

```

## Step 4: Model Deployment on Flask(app.py)

```

app.py > ...
Click here to ask Blackbox to help you code faster
1 import pickle
2 import numpy as np
3 from flask import Flask, jsonify, request, render_template
4
5 flask_app= Flask(__name__)
6
7 model=pickle.load(open('model.pkl','rb'))
8
9 @flask_app.route("/")
10
11 def Home():
12     return render_template("file.html")
13
14
15 @flask_app.route("/predict", methods = ["POST"])
16
17 def predict():
18     float_features=[float(x) for x in request.form.values()]
19     features = [np.array(float_features)]
20     prediction = model.predict(features)
21     return render_template("file.html", prediction_text = "The species name of iris flower is {}".format(prediction))
22
23
24 if __name__=="__main__":
25     flask_app.run(debug=True)

```

```

[Running] python -u "c:\Users\hp\Desktop\DG-DS Internship files\Proj;2\app.py"
* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
